DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 4-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kreitzer et al.

Kreitzer et al. (US Patent Number 6,195,209 B1) discloses:

- Regarding claims 1, 5 and 7, a projection lens (Figure 10, element 13) having a zoom function that forms a projected image (column 2, lines 12-13), corresponding to an image signal on the screen (column 2, lines 21-23); a zoom state detection section that detects a zoom state of the projection lens (column 2, lines 13-18); and an uneven color correction section (i.e. correction of chromatic aberrations) that performs uneven color correction on the image signal based (column 3, lines 11-14) on the zoom state detected by said zoom state detection section (column 9, lines 32-36).
- Regarding claim 4, a light valve (i.e. DMD, LCD and the like; column 2, lines 64-65) that modulates at least one of the transmitted light and reflected light according to the image signal (column 3, lines 6-10).

- Regarding claim 6, calculating uneven color correction data (i.e. correction of chromatic aberrations; column 3, lines 11-14) according to a detected zoom state (column 9, lines 32-36); and performing the uneven color correction on the image signal using the calculated uneven color correction data (column 3, lines 11-14).

Allowable Subject Matter

3. Claims 2-3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed on 10/14/2005 have been fully considered but they are not persuasive.

5. The applicant has argued that the prior art does not teach the "at least the features of a zoom state detection section that detects a zoom state of the projection lens, and an uneven color correction section that performs uneven color correction on an image signal based on the detected zoom state". However, Kreitzer et al. (US Patent Number 6,195,209 B1) teaches such zoom state detection section that detects a zoom state of the projection lens (column 2, lines 11-13), and an uneven color correction section that performs uneven color correction (i.e. chromatic aberration correction) on

an image signal (i.e. image of a pixelized panel) based on the detected zoom state (column 2, lines 13-18 and column 3, lines 11-19).

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
